

**ABSTRACT**

A networked information resource generation system includes a wireless network (10), a transceiver (12) and mobile devices (14 a-c). The mobile devices (14a-e) share information over the network (10) via the transceiver (12). The information shared over the network (10) is displayed on the mobile devices (14 a-e) web-page (71) which is dynamically updated with information from the mobile devices (14 a-e).

10 To be accompanied, when published, by Figure 1 of the drawings.
